Notes:

- **Rice straw** is preferred because it does not contain viable invasive weed seeds, that are found in wheat straw.
- **Barley seed** is preferred because it grow quickly and is not invasive like Santa Cruz erosion mix and other mixes.
- **Bio-wattles, pure Barley Seed & Rice straw** are much better for general erosion or sediment control than plastic netted wattles, wheat straw or any of the erosion control seed mixes.
- **Bio-wattles** are preferred because they have a burlap/jute net which does not entrap and kill animals.
- For control or prevention of toxic runoff, **Silt Socks** like products are better than wattles.
- **Silt Socks** are just one product, often used to control or prevent toxic runoff. There are a number of like purpose products available.
- Prices are usually the same or very close in cost.
